Enhanced insertion capability takes you further into the peripheral bronchi
OES Bronchofiberscope OLYMPUS BF TYPE XP60

Super-slim 2.8 mm scope with reduced bending radius section takes you deeper into the peripheral bronchi

- Unprecedented insertion capability with a shorter bending radius than the preceding model and an extra-slim design that's only 2.8 mm across at both the distal end and insertion tube allows you to reach even the peripheral bronchi.
- In spite of the slim design, the instrument channel measures 1.2 mm across.
- Wide 90° field of view enables accurate observation of a wider area.
- 180° up / 130° down angulation for easier maneuvering in the bronchi.
- 400 mm working length ideal for use in the tracheobronchial tree.
- Compatible with both OES and IVIS video systems.
