Rhino-Laryngo Fiberscope

ENF TYPE GP
The Fully-Portable, Yet Always Reliable
ENF-GP Rhino-Laryngo Fiberscope

The ENF-GP not only provides large and bright high-resolution images, which builds on the acclaimed optics of the ENF-P4, but also features enhanced illumination as a result of its improved light distribution system.

Rechargeable Miniature Light Source with LED
EndoLED WA91502A transforms the ENF-GP into a portable fiberscope. Perform high-quality examinations anywhere within the medical facility.

Wide Field of View / Ideal Length For Observing Large Areas
The ENF-GP has a wide 85° field of view, which permits excellent visualization of the vocal cords. The 300 mm length makes observation of the nasal cavity and pharynx easier, and you'll be able to work at a more comfortable distance from the patient when observing the larynx.

130° Up/Down Angulation For Easier Insertion And Diagnosis
Wide angulation range permits smooth insertion and easier maneuverability, for thorough examination of the larynx and hypopharynx.
