

WCON-08X Wide Converter

- Wide converter lens
- Shortens the focal length by 0.8x
- Bayonet mount for easy and quick connection

Get a wider angle of view

The Olympus wide converter lens allows a wide-angle shot with a focal length equivalent to 22.4mm* when attached to the front. Because this is a front-type converter lens, the 1:2.8 constant bright aperture of the STYLUS 1 series will be maintained. Therefore it is possible to enjoy the high brightness even for close-up subjects, making it effective for shooting landscapes, a large group of people or indoor scenes. The WCON-08X is compatible with the STYLUS 1 series and can easily be attached via the special conversion lens adapter CLA-14. *35mm equivalent
